Profile

Senior Frontend Engineer with 7 years of experience architecting and shipping complex, production-grade web applications end-to-end. Proven track record owning full UI systems — from monorepo architecture and micro-frontend design to feature delivery — including two flagship SaaS products used by 75% of the world's top life sciences companies. Deep expertise in React, TypeScript, Redux, and scalable frontend architecture (Turborepo, Module Federation), with a strong focus on performance, testing discipline (TDD), and developer experience.

Technical Skills

Languages: JavaScript (ES6+), TypeScript

Frameworks & Libraries: React.js, Redux, Redux Toolkit, Node.js, Express

Architecture: Micro-frontends, Webpack Module Federation, Turborepo, Monorepo

Testing: Jest, React Testing Library, TDD (Unit, Integration, E2E)

Performance & Monitoring: Lighthouse, Web Vitals, Code Splitting, Bundle Optimization

DevOps & Infrastructure: Docker, CI/CD Pipelines, Nginx (Gzip/Caching Config)

Styling & Design: CSS3, SCSS/SASS, Design Systems, Responsive Design, Web Accessibility (WCAG)

APIs & Integrations: REST APIs, Server-Sent Events (SSE), Adobe Analytics, Mixpanel

Experience

ConcertAI

Jul 2023 – Present

Senior Engineer

Bengaluru, India

- Owned end-to-end UI architecture for **Precision Trials** and **ACT** as the sole frontend engineer since inception — two of ConcertAI's flagship clinical AI SaaS products, deployed in production for enterprise pharma and healthcare clients.
- Designed and shipped the IE Digitization flow, replacing a manual drag-and-drop criteria-building process with a natural language interface for cohort generation, cutting cohort creation time from 3 hours to 15 minutes.
- Built Site Selection and Study Design Agent UIs powering AI-driven site recommendations, enrollment forecasting, and diversity modeling — capabilities the platform uses to reduce trial design and execution timelines by 3–9 months and unlock \$4M+ in potential cost savings per Phase II/III study.
- Built UI surfaces for ACT's predictive modeling engine, presenting trial success probability forecasts (up to 30% more accurate than traditional estimation methods) to help sponsors make faster, data-backed go/no-go decisions.
- Bootstrapped 5 independent product monorepos (Precision Trials, ACT, Explorer, GTM, Launch) using Turborepo, establishing shared package boundaries and task-level caching across the Precision Suite.
- Led TDD adoption using React Testing Library and Jest; improved application performance by 25% (Core Web Vitals) through code splitting, lazy loading, Brotli compression for high-payload APIs, and HTTP caching strategies (Cache-Control, ETag).
- Currently building **CancerLinQ** — Patient View, Pre-Screening, and Schedule View modules enabling CRCs and site coordinators to track trial-screening status and take timely, visit-based actions across the full patient journey.

Publicis Sapient

May 2021 – Jul 2023

Associate Technology L2

Bengaluru, India

- Built a multi-brand offers homepage for **Stellantis** (RAM, Jeep, Chrysler, Dodge, Alfa Romeo, Fiat, and more), dynamically rendering brand-specific content and configurations via Adobe Experience Manager (AEM).
- Designed and implemented an offers engine supporting complex AND/OR offer-combination logic, correctly rendering all valid permutations of stacked and conditional promotional offers across brands.
- Architected reusable AEM component templates for the offers and homepage modules, enabling content authors to configure brand-specific experiences without engineering intervention, reducing time-to-launch for new brand campaigns.
- Led internationalization of the **Maserati** platform (legacy AEM + React codebase), implementing country/language-based routing (e.g., /us/en, /it/it) to support localized content rendering across 10–12 countries.

- Integrated Adobe Analytics across the platform, enabling funnel tracking and personalization insights that directly informed product decisions.
- Designed and implemented a shared React component library following TDD principles, enforcing consistency and reusability across a multi-contributor codebase.

Infosys

Aug 2019 – May 2021

System Engineer

Bengaluru, India

- Built an enterprise iOS device lifecycle tracking application in React.js, managing device journey from manufacturing to customer sale across an end-to-end workflow.
- Translated wireframes into responsive, production-grade React components and established frontend coding standards for the team.

Education

B.P. Poddar Institute of Management and Technology

2015 – 2019

Bachelor of Technology in Computer Science and Engineering (CGPA: 8.06)

Kolkata, India
